

Wide-Area Digital Trunking

August, 2009: Ancom Communications has constructed a new Wide-Area Digital Trunked Radio System in the Minneapolis / St. Paul Metro area.

If you haven't heard or tried a digital radio, we would encourage you to take the time and try one of our demonstration units. We think you will find the improved features and benefits of the digital radio system will be a welcome change for your business communications.

Our MOTOTRBO Digital Trunked System offers the following advantages:

- The system is centrally located — downtown Minneapolis — on the US Bank building. Antenna height approximately 800 feet above ground.
- Digital Radios dramatically reduce hiss and static, your conversations will be much clearer.
- It's digital so scanners / competitors cannot listen in on your communications.
- All of the radios, mobiles and portables come with GPS embedded.
- Purchase the GPS mapping software and see where all of your assets are at any given time.
- Text messaging — standard on the display model radios.
- Dispatch to entire fleet or to just one radio if you prefer.
- Supervisory group can talk among themselves privately.
- Paging of individual radios and / or groups.
- Call Alert — Leave a visual indication that a call was missed.
- Radio Kill — If someone loses a radio, a supervisory radio can send a command to put that lost radio to sleep.
- Radio check — verify a radio is turned on and receiving.
- Remote monitor — ability to turn on a radio remotely and listen.
- The XPR portables are submersible (IP57 and IP67).
