Accelerate Performance—  
With the MOTOTRBO™  
Professional Digital  
Two-Way Radio System

MOTOTRBO™ brings you advanced performance and capabilities to accelerate your productivity.

### Enhanced productivity starts with better basic communication

The next-generation professional two-way radio communication solution is here, with enhanced performance, productivity and value. MOTOTRBO™ combines the best in two-way radio functionality with digital technology to deliver increased capacity, integrated data applications and enhanced voice communications.

### Easy Migration at Your Pace

MOTOTRBO's ability to operate in both digital and analog modes enables compatibility with legacy analog radios. This enables a smooth, planned migration at your pace—no sticker shock, no disruption.

### Data Applications

MOTOTRBO data capability supports advanced applications, including Location Services—with GPS location tracking of people and assets, such as vehicles. And Text Messaging Services adds a PC-based client/server software application for dispatch oriented messaging to the system, which extends the capabilities of messaging to include communication between radios and dispatcher PCs.

### Exceptional Value

For all its performance and capability, MOTOTRBO is affordably priced. Its advanced digital technology enables you to support more communication and more users with a single license. And there are no monthly airtime charges—ever. It all adds up to greater value—with more performance and productivity for your dollar.

### Experience the digital difference

Stop in to see for yourself how Motorola's MOTOTRBO can help boost productivity. Let our experience help you design a solution that you can count on. After all, staying connected is what helps keep job sites in control. Stop in or contact us today for more information.
